

INSTRUCTIONS

For Attaching Foil License Plates and Support Plates

IMPORTANT INFORMATION

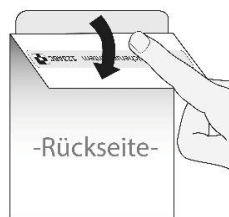

Before fully sticking on the foil license plate, you **must** screw the **support plate to your vehicle!**

The license plate **must not be glued directly onto the vehicle!**

It is recommended to follow the instructions: first **stick a narrow strip** of the foil license plate **onto the support plate**, and only then mount the plate to the vehicle.

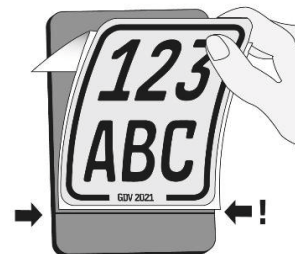

Do not peel off the foil license plate after sticking it on, otherwise the insurance coverage expires.

1

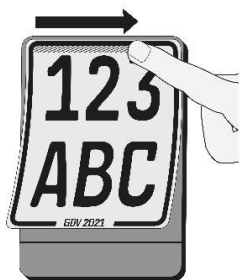

Detach the upper edge of the license plate from the backing paper. Fold the backing paper downwards along the **perforation**. This exposes a narrow strip of the adhesive surface (approx. 1 cm).

2

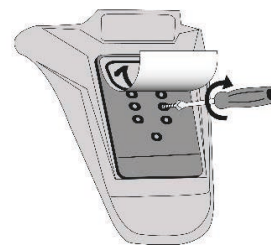

Place the license plate with the backing paper against the alignment edge at the bottom of the support plate. Align it centrally.

3

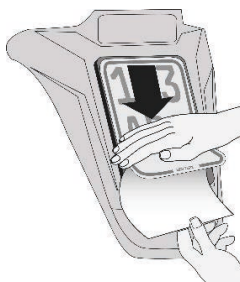

Now stick the upper narrow strip of the foil license plate with the exposed adhesive surface onto the support plate.

4

Now screw the support plate to the vehicle. Several pre-drilled holes are available for this purpose.

5

Now smooth the foil license plate slowly from top to bottom onto the support plate using a downward motion. For example, the flat of your hand or a ruler is suitable for this. Simultaneously pull off the backing paper from the rear side.

6

The attached foil license plate is valid until the end of February. A new traffic year begins on March 1st. You can simply stick the new foil license plate over the previously cleaned, already attached foil license plate.
